Installation Manual for E1F Cable Gland

E1F Series of Flameproof and Increased Safety Cable Glands suitable for Armoured Cables

Please read all instructions carefully before beginning the installation CABTEK E1F type Cable Glands are for Indoor and Outdoor use in the appropriate Hazardous Areas with Armoured Cable. They seal on the outer jacket and give environmental protection to IP67. They are suitable for normal industrial environmental of temperature, humidity and vibration.

Cable Glands are made of Brass CW614N/SS316L & assembled with VMQ Silicone Rubber and Nylon Substrate.

Material Compatibility under chemical corrosion or attack by aggressive substance must be considered before installation.

Cable Gland confirm to following Standards for Group II, Category - 2 for Zone 1, 2, 21 & 22 for ambient temperature range -60°C≤Ta≤+125°C.

Standards Applied:	EN IEC 60079-0: 2018 EN/IEC 60079-1: 2014 EN/IEC 60079-31: 2014/2013	IECEx

Installation Guide:

1. Installation must be carried out by a competent electrician, skilled in cable gland installation.

PFSO

ETL22ATEX0109X, IECEx ITS 16,0041X

ТС RU C-IN.ГБ08.В.02588. P427828/1

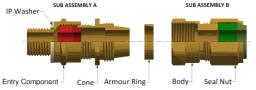

2. Installation should not be carried out under live conditions.

- 3. Once installed do not dismantle except for occasional inspection. If necessary, dismantle by reverting the installation instruction. The gland is not serviceable and spare parts are not supplied separately.
- 4. Parts of glands are not interchangeable with any other design. If manufacturer's parts are mixed, certification will be invalidated.
- 5. The female thread in the enclosure must comply with relevant standard and do not damage threads on assemblies.
- 6. The glands should only be used with substantially round and compact cables with correct tools. Installation should only be performed by a competent person using the correct torque tools. Spanners should be used for tightening. Read all instructions before beginning installation.

INSTALLATION INSTRUCTIONS FOR CABLE GLAND TYPES E1F.

It is not necessary to dismantled the cable gland assembly as shown below

1. Prepare the cable by stripping back the cable outer sheath and armour to suit the equipment geometry. Expose the armour by stripping back the outer sheath further using the table below as a guide. If applicable remove any tapes or wrappings to expose cable inner sheath

2. Separate the gland into two sub-assemblies "A & B". Ensuring that the Outer Seal Nut is relaxed, pass sub-assembly "B" over the cable outer sheath and armour followed by the Armour Ring

2 7. Any modification which differs from the condition as delivered is not permitted.

IM / Cable Gland E1F Series/Rev. 01/12.01.2022

8. Accessories are available from CABTEK, as optional extras, to assist with fixing, sealing and earthing, Locknut, Earth Tag, Serrated Washer, Entry Thread seal (IP), Shroud.

Special Condition of Safe Use of Cable Glands:

- 1. Cable Glands are only suitable for fixed installations.
- 2. Cable must be effectively clamped from pulling and twisting.
- 3. Cable Glands shall not be used in enclosure where the temperatures at the point of entry /mounting are outside the range of ambient temperatures as detailed in general description.
- 4. The glands should only be used with substantially round cables and tightened to the rated torque with torque wrenches.
- 5. Install in accordance with requirements of EN60079-14.
- 6. The cable glands are provided with a sealing ring with an axial sealing height of at least 5 mm. With reference to the clearance groove, the end-user should ensure that at least five complete turns of the connector thread are made. In order to guarantee a screw depth of 8 mm, the enclosure should have a wall thickness of min. 10mm; if <10 mm, then if necessary, use a washer when cable entries are attached to the pressure-resistant enclosure.
- In the case of NPT connecting threads, the end-user must ensure that the necessary IP protection is guaranteed; this can be done using a suitable thread sealing agent.

8. Installation should not be carried out under live conditions. CABLE GLAND ORDERING DETAILS: Product Code for Ordering Purpose XXXX X XX XXX XX X *Cable Gland Size Accessories (Refer Gland Selection Table) 5= Lock Nut E1FW/E1FX/E1FU 6= IP Washer 7= Serrated Washer Material Specification 8= Ingress Disc Brass =1 9= Earth Tag Stainless Steel =2 Entry Thread Type Nickle Plated Brass =3 11= Standard N Shroud Type 12= Standard NPT 13= ET Thread 14= PG Thread PS= PVC Shroud LS= LSF Shroud 15= BSP Thread SL= LSOH Shroud 16= Optional Metric 17= Optional NPT PC = PCP Shroud 20= Optional BSF For example: 20sE1FW 3 11 PS 6 = E1FW-20s-M20 Nickle Plated Cable Gland with PVC Shroud & IP Washer

20sE1FW 3 11 PS569 = E1FW-20s-M20 Nickle Plated Cable Gland Kit* (*Kit includes PVC Shroud, Lock Nut, IP washer & Earth Tag)

4 Ensure that the inner seal is relaxed by slackening the Main Item. Secure sub-assembly "A" into th equipment either by screwing the Entry Item into a threaded hole or by securing it in a clearance hole using a locknut as applicable.

Locate the Armour Ring into its recess in the Main Item. Pass the cable through sub-assembly "A" until the armour engaged with the cone. Spread the armour evenly around the cone

While continuing to push the cable forward to maintain contact between the armour and the cone, tighter the Main Item (cone) until the inner seal makes contact with the cable inner sheath (heavier resistance i felt at this point). Tighten a further full turn

Hold the Main Item (2) with a spanner and tighten sub-assembly "B" onto sub-assembly "A" using a spanner until all available threads are used.

Only using finger pressure, tighten the outer seal nut assembly (6) until light resist-ance to tightening is met. Then either use the outer seal tightening guide tape or table on the rear of the page to determine how much further to tighten the seal using a spanner (using the outer seal tightening guide is recommended).

Warning:

Please study carefully these instructions before installation. These glands should not be used in any application other than those mentioned here, unless CABTEK states in writing that the product is suitable for such application. CABTEK will not take any responsibility for any damage, injury or other consequential loss caused where the glands are not installed or used according to installation instructions. This leaflet is not intended to advice on the selection of cable glands. Installation must be carried out by a competent electrician, skilled in cable gland installation. Installation should not be carried out under live conditions. **Customer Care:**
